Re: Annual Reporting Requirements for KRS 160.325

Gentlemen:

The attached report is submitted pursuant to KRS 160.325 for fiscal year 2013/14 which in part required:

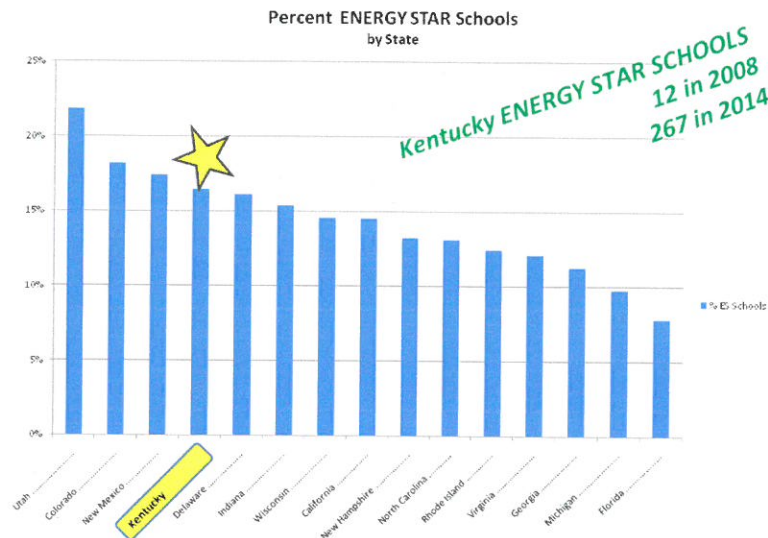

Mandatory annual filing of a state-wide report with the Department for Energy Development and Independence (DEDI) and the Legislative Research Commission on the status and development of energy management plans by boards of education and the anticipated savings to be obtained by those plans.

This year's report was initiated by a letter under Energy and Environment Cabinet Secretary Dr. Len Peter's signature to school superintendents on August 1, 2014 requesting that districts submit their fiscal year 2013/14 Energy Management Report. A template was sent to school districts asking for specific information on conditioned square footage, energy usage, and cost by energy source. Of the 173 school districts, 100% have fulfilled this request. This year's report has been compiled by the School Energy Management Project within the Kentucky School Boards Association

An Energy Utilization Index, EUI, which shows the energy use (kBtu) per square foot, has been calculated at a statewide level and for each reporting district. For the base year of fiscal year 2009/10, the statewide EUI index was 65.1 kBtu/sf/yr. The year's EUI number has significantly improved by dropping to 60.9 kBtu/sf/yr. The Index is up slightly from fiscal year 2012/13 because of last year's harsh winter and an annual number of degree days during 2013/14 which was 6.8% higher than the 5-year average.

Even so, the corresponding cumulative avoided cost to date from consumption reduction, rate corrections, rebates, refunds and utility case intervention is nearly \$47 million.

At the time of enactment of KRS160.325 there were 12 ENERGY STAR labeled K-12 schools in the Commonwealth. Today there are 267, making Kentucky fourth in the nation on a percentage basis. Table 4 is a listing of K-12 ENERGY STAR labeled schools by district.

Please address questions or comments to;

Respectfully,

Mike Armstrong  
Executive Director, Kentucky School Boards Association

cc: Dr. Terry Holliday

Table 1 shows the statewide energy costs, energy usage and square footage for both the base year and recent fiscal year. Table 1 also summarizes the energy usage and costs for each energy source as well as the statewide average price and price range.

Overall observations and conclusions for the reporting districts when comparing to base year 2009/10:

- The conditioned square footage has increased 5.1%.
- The total energy use (MMBTU) has decreased 1.7% even with the additional of over 5 million square feet.
- The total cost of energy for public school districts has increased 9.4%.
  - Cost of electricity has increased 11.3%
  - Cost of natural gas decreased 2.6%
- Greater cost increases for electricity have been mitigated by ensuring school districts are on the correct rates and by focusing on reduced electrical demand in districts where funded energy managers are present.

Figures 1 and 2 show the distribution of district Energy Utilization Index values compared to the base fiscal year 2009/10 and the most recent fiscal year 2013/14. Comparisons of these figures show a lowering of the overall average and a tightening of the distribution.

Table 2 shows the Site Energy Use Profile statewide. A comparison to the base year is provided. The impact of last year's cold winter is reflected in the increase in natural gas and propane usage which are used as heating fuels.

Table 3 shows a ranking of school districts based on their 2014 EUI. Despite the bad winter, 48 school districts lowered their district EUI from the previous year. An additional 24 were within 2% of last year's EUI value. Since the start of the School Energy Manager Program, 114 of the 173 school districts have reduced their overall EUI.

One of the data verification tests used this year was to compare the data submitted in MUNIS with the data submitted on the Energy Management Report Template. MUNIS is the financial software package used in all 173 Kentucky School Districts. This software leads to consistent reporting of required school district financial information. MUNIS only tracks account codes and dollars and as such is not useful as an energy tracking database. However, the costs show a high correlation between reported energy costs.

Figure 3 shows a graph of the MUNIS school energy costs from fiscal year 2000 through fiscal year 2014. This graph shows that these costs had nearly doubled between fiscal years 2000 and 2008. The timing of House Bill 2 (later KRS160.325) could not have been better in recognizing those rising energy costs. That legislation coupled with the School Energy Manager Program in 2010 has led to several years of relatively flat energy costs for schools.
