 for each remote location this
 is existing today

WAN Connectivity service must support the following technologies and services:

- a. QOS (Quality of Service)
- b. Support for customer 802.1Q, VLAN tagging
- c. Jumbo Frames (MTU > 1600)
- d. Voice over IP (VoIP)
- e. Shortest Path Bridging (SPBm 802.1aq)

Windstream's Virtual LAN Service (VLS) extends communications across multiple business locations with fast and secure connections. Windstream's networking services provide a private, secure multi-site connection built across the Windstream core MPLS (Multi-Protocol Label Switching) advanced IP network. VLS delivers Layer 2 MPLS VPN technology with a Hub & Spoke Topology allowing the passing of all customer traffic across the customer's VLS solution. Flexible routing options allow businesses to maintain control over their own routing, IP address plans, VoIP, QoS and VLAN's.
