

A physiological evaluation of people who are attempting to  
purchase a gun.

Julian, David

# Why we chose this as our bill

We chose this topic as our bill because it was a relevant topic at the time.

Our bill is extremely important because it could save lives. People who are mentally ill accounted for more than 5% of gun related deaths. This could've been avoided had there been a law in place to prevent these people from obtaining a firearm legally.
