City:	Mount Washington
State:	KY

Destination

Name:	Lexington Center
Address:	430 W Vine St, Lexington, KY 40507
City:	Lexington
State:	KY

Lesson Plans

4-ESS3-1. Obtain and combine information to describe that energy and fuels are derived from natural resources and their uses affect the environment. [Clarification Statement: Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; nonrenewable energy resources are fossil fuels and fissile materials. Examples of environmental effects could include loss of habitat due to dams, loss of habitat due to surface mining, and air pollution from burning of fossil fuels.]

The students will attend the NEED day in Lexington to present their project that they have been working on throughout this year. My students will share what they have learned about PHANTOM LOADING and how people at our school, home, and community can save money and save Earths valuable resources.

The students will also view and learn about other elementary, middle, and high school projects from around the state while learning more information about energy. After the trip is over students will reflect on how well their presentation went as well as what they have learned through observing other presentations.
