

Recommendation for Streetlight location on Creedence and Trinity

Greg and I have studied the property and feel that three lights at the marked locations would adequately serve the neighborhood. From the intersection of Twilight, Quail and Jewell where there is currently a light to our first recommendation is 375'. To the next spots would be 160' and 185' respectively. To the next existing light location would be 375'.

These distances would be well within the distance we have given as a new recommended standard.
