What is Toshiba's Automated Meter Read Program (AMR)? As part of your service contract with TBS, you are required to report usage data for all your printers, copiers, and multifunction devices. With manual reporting, you must go to each device, record the serial numbers and meter readings, and submit this information via email, fax or phone. Toshiba's AMR program automatically gathers usage data for each device and sends it securely to TBS at scheduled intervals. The result is more accurate and timely reporting, fewer billing errors, and less busy work for you.

How much does Toshiba AMR cost me?

Nothing, Ever.

What information does AMR gather?

The automated meter reading system captures all required information for billing purposes; Machine model, Serial number, and usage information.

Is the transmission secure?

Yes. Data is completely secure.

Toshiba Business Solutions IT Team will work with you to set up equipment meter collections in the priority listed below:

1 Automated Meter Read (e-Bridge CloudConnect)

Your Toshiba system will be equipped with two-way communication capabilities. TBS will provide updates, system back ups, and meter collection automatically. Equipment MUST be connected to your network.

2 Automated Meter Read (On Site Software)

TBS will provide free AMR software that will automatically pull meter information and input into TBS billing system. Equipment MUST be connected to your network.

3 Meters Online (MOL)

An automatic meter request is sent to the End User directly from the TBS billing system.

End User collects the meter readings and goes to http://meters.toshiba.com and enters the meters online manually.

All meters submitted via online are electronically imported into the TBS billing with no manual entry or interaction by TBS.

TBS may charge a fee to recover the cost of meter collections if meters are not submitted through the automated website. TBS reserves the right to convert Customer to a flat fee, based upon the greater of a specific unit's historical average volume or the device type's midpoint
