GE APPLIANCES
a Haier company

For the past 12 years, Bullitt County Public Schools has partnered with GE Appliances (GEA) and their Director of Engineering Development, Mr. Mike Ekbundit. This continued partnership helps support several of our Graduate Profile competencies, especially that of students being “Innovative Problem Solvers”. The focus of this year’s projects is all about accessibility and inclusion - students are working to solve “mismatches”, or barriers to participation, in their community. Mr. Ekbundit and several engineers from GEA visited the district to support students through the “7 Ways” Process. Each student had to independently come up with 7 ways to solve mismatches and then collaborated with their groups to determine the effectiveness and buildability of each idea before selecting just one to pursue together.

2021-2022 Growth Goals

- Utilize continuous improvement strategies, professional learning communities, and other collaboration efforts at all levels of the District to foster high academic achievement as the District's highest priority
- Maintain financial accountability and budget integrity by continuing to focus on strategic allocation of resources
