| <p>Middle School Soccer/football Game field</p> <p>My recommendation is to get a soil sample so we know exactly what the field needs, determine what you want the field to look like. Need to know if you want Cool season vs. Warm season grasses. In my opinion the middle of the field looks wore out and is very compacted. There are several ways we can make this field look great and keep someone from getting hurt on this field. As of now there are many clumping grasses as fescue on the field which some one could get hurt. I will give you my opinions as to what to do below.</p> <p>A. Bermuda the field</p> <p>Spray round up and kill it out and slit seed the Bermuda Seed in and keep the field as is, no dirt work on it.</p> <p>Athletic Field Application Grow in</p> <p>Recommend putting 15 loads of topsoil (topsoil paid by owner) and us level prior to seeding and laser grading</p> <p>Yearly needs to maintain the field</p> <p>Athletic Field Application</p> <p>Recommend 7 application per year like we do at the football field.</p> <p>Core aerate field 3 times a year</p> | <p></p> <p></p> <p></p> <p>20</p> <p></p> <p></p> <p>7</p> <p>3</p> | <p></p> <p>3,200.00</p> <p>200.00</p> <p>4,251.00</p> <p></p> <p>200.00</p> <p>250.00</p> | <p></p> <p>3,200.00</p> <p>4,000.00</p> <p>4,251.00</p> <p></p> <p>1,400.00</p> <p>750.00</p> |
