Re: Exhausting the Filtra Box fume extractor on the Boss Lazer

Walker Mechanical is pleased to quote the following for your consideration.

- We will provide labor and materials to ventilate (2) exhaust ducts from the Boss Lazer systems from the Filtra Box fume extractors.
- We will run the ducts through the attic space to the outside terminating at the eve.
- We will seal up the duct with a mastic coating at the seams to prevent any leakage.
- We will provide wall louvers and sheet metal housing and terminate the exhaust through the eve to the outside of the building.
- **Note: The Filtra Box fume filter company recommended not to tie in an exhaust fan to their filter when vented to the outside.**
- **Note: The kits to convert the filter system to an outside exhaust system is an additional \$625.40. + shipping. We can provide them if needed.**

The total cost for the above scope of work is \$4,900.00.

Notes/Exclusions:

- **Concrete wall repairs, unforeseen obstacles located in the wall penetrations.**
- **Due to recent tariff agreement changes, this price remains valid for a limited time. However, it may be subject to revision before accepting a written purchase order.**
- **Work delays resulting from conditions beyond the control of Walker Mechanical and/or those that are caused by owner or owner's contractors shall result in additional charges.**

Any problems found with existing parts, material or equipment will be additional to this proposal.

All work will be performed during normal business hours Monday-Friday 7:30 to 4:00.

Please feel free to contact me with any questions or concerns at 502-548-0474.

Sincerely, Steve Murray

Steve Murray
