

## **Board Report**

Jim Seward, Director of Technology

August 2025

### **Software:**

The beginning of each school year requires updating the various district software with new employees, new students and newly created classes. Databases the tech department provides requested assistance with includes: Infinite Campus, Active Directory, Food Service Mosiac, MAP Assessments, and many others.

### **Data Security**

Data Security Document has been updated and shared with you.

### **Device Deployment**

We have had three device deployment days for BMHS. In my opinion, it was very successful. We have approximately 40 students that have not picked up their devices. We will work with those students during the first week of school.

### **Student Devices**

As we start this school year, all students in grades 2-12 will have Chromebooks. The exception to this is our dual credit students. They will need to continue on Windows based devices. Our K-1 students will continue on iPads with the future goal of getting Chromebooks for them.
