Architectural drawing of the roof structure of the National Stadium in Mexico City. The drawing shows a large dome with a central peak and two side peaks. The structure is supported by a series of columns and beams. The drawing includes various structural details and labels, such as 'COLUMNA', 'TRUSS', 'ROOF', and 'FLOOR'. The drawing is a technical drawing, showing the structural elements of the roof.

Architectural drawing of the roof structure of the National Stadium in Tokyo. The drawing shows a large, curved, ribbed roof structure, likely a dome or a series of connected arches, with a central peak and side sections. The drawing is a technical sketch, showing the structural framework and the overall shape of the roof. The drawing is labeled with 'National Stadium' and 'Tokyo'.

Architectural drawing of the interior of the National Stadium, showing the seating bowl, field, and structural elements. The drawing is a cross-section, highlighting the large, arched roof structure. Labels include 'SEATING BOWL', 'FIELD', 'STANDING FLOOR', and 'FIRST FLOOR'. A scale bar is provided at the bottom right.

GENERAL RCP NOTES

1. Introduction
 The purpose of this report is to provide a comprehensive overview of the current state of the research on the effects of climate change on the environment. This report will discuss the various ways in which climate change is affecting the environment, including the impact on the atmosphere, the oceans, and the land. It will also discuss the potential consequences of climate change for human health and the economy.

2. Background
 Climate change is a global phenomenon that is caused by the increase in greenhouse gases in the atmosphere. The greenhouse effect is a natural process that warms the Earth's surface. However, the increase in greenhouse gases is causing the Earth to warm at a much faster rate than it has in the past. This is leading to a variety of changes in the environment, including rising sea levels, more frequent and severe weather events, and the melting of glaciers and ice sheets.

3. Methods
 The data for this report was collected from a variety of sources, including scientific journals, government reports, and news articles. The data was analyzed using a variety of statistical methods, including regression analysis and time series analysis.

4. Results
 The results of the analysis show that there is a clear link between the increase in greenhouse gases and the changes in the environment. The data shows that the Earth is warming at a much faster rate than it has in the past, and that this is leading to a variety of changes in the environment. The results also show that the potential consequences of climate change for human health and the economy are significant.

5. Conclusion
 The results of this study indicate that climate change is a serious threat to the environment and human health. It is essential that we take action to reduce greenhouse gas emissions in order to prevent the worst effects of climate change.
