Everett 11/16/25	Did our ML population increase from last year to this year. Can we show this increase by school.	Here is <a href="#">link</a> to a data table that shows the number of ML students by school as of Oct 2024 and Oct 2025. While there have been shifts at some schools, the total enrollment is relatively stable for this comparison point in time.

Yes, we can provide assessment results (% students scoring novice, apprentice, proficient or distinguished for each content area) for ML and non ML students. The KDE school report card website also provides the data disaggregated by these groups as well.
