The Work shall be carried out in accordance with the following supplemental instruction issued in accordance with the Contract Documents without change in Contract Sum or Contract Time. Proceeding with the Work in accordance with these instructions indicates your acknowledgment that there will be no change in the Contract Sum or Contract Time.

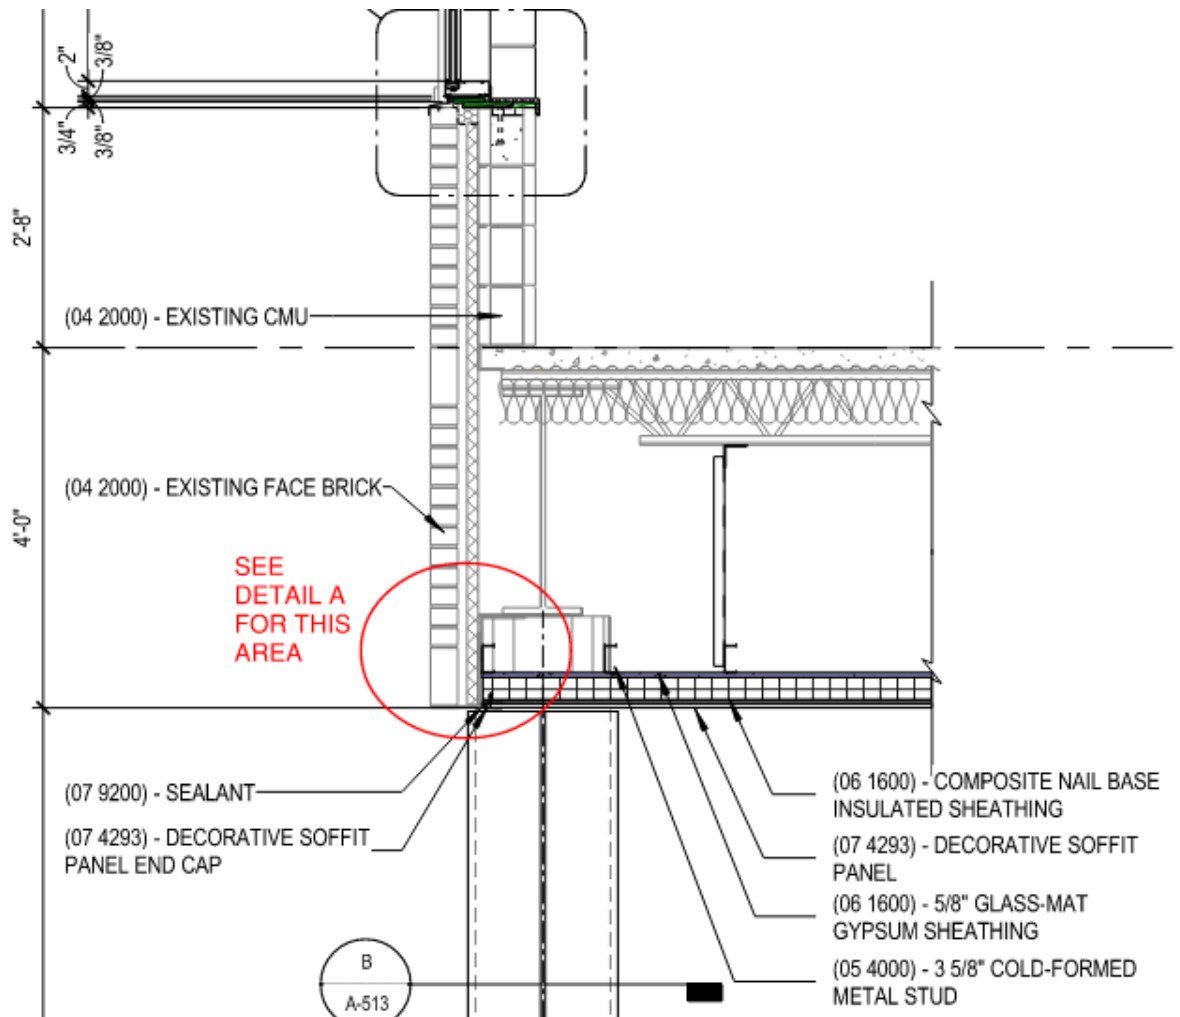

DESCRIPTION:

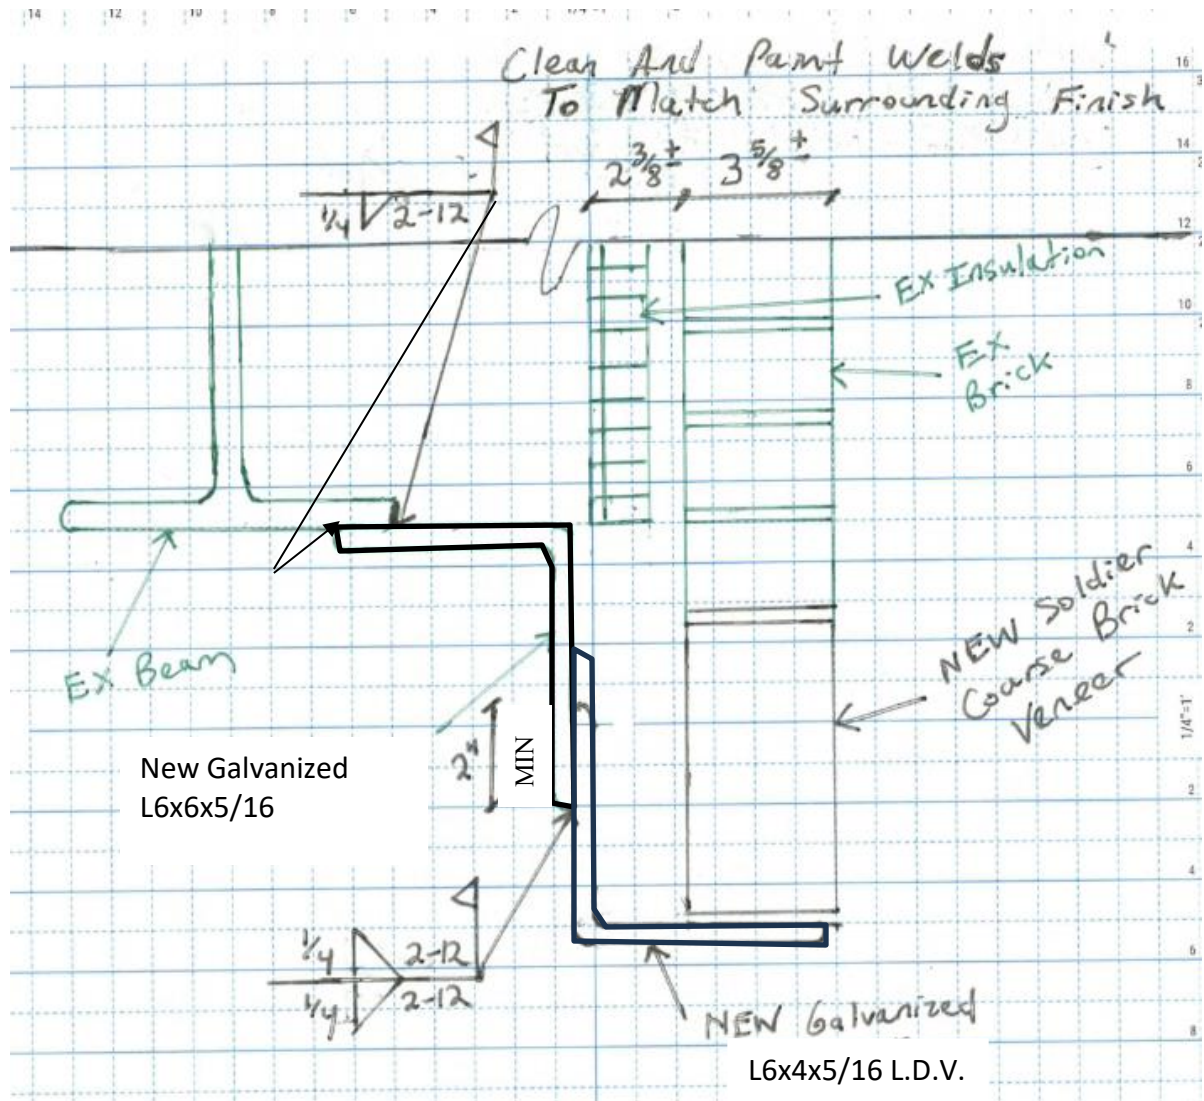

Field investigation and review of attached photos indicate that the existing edge angle supporting the brick veneer is in unsatisfactory condition due to water infiltration within the cavity. Water accumulation has led to significant corrosion of the edge angle, along with the failure of the top weld connecting this angle to an upper supporting angle that is welded to the existing structural beam. These welds are crucial for ensuring proper load transfer of the brick veneer into the structural beam and pose a threat to public safety in their current condition.

Contractor shall carefully remove and replace the existing soldier course of brick veneer and support angle system in four-foot segments, utilizing adequate shoring below the relief angle on each side of the cut-out sections to provide support to the brick veneer (and prevent overloading of the brick ties due to gravity selfweight). Remove brick soldier course and relief angle only over the width of the segment to allow the veneer above to arch between the shoring. Work may be simultaneously performed in a skip pattern of alternating 4 foot sequences; do not demolish adjoining sequence until new mortar is cured. New angles shall be galvanized, L6x4x5/16 (bottom) + L6x6x5/16 (top) and welded to the existing and to the existing steel beam with fillet welds. New flashing with a drip edge, weeps, and ties shall be installed. See **Detail A** for a detailed sketch of the proposed work. See **Appendix A** for elevation views of repair locations (to be three sides of terrace at Area J).

- *Contractor shall field verify dimensions*
- *All steel shall be galvanized and prepared according to Recommended Practice for Providing High Quality Zinc Coatings (Hot-Dip) on Assembled Products (ASTM A385).*

A portion of Sheet A-371, Elevation H is shown below. A hand sketch relating to this ASI is labeled **Detail A** and shown on the next page.

Detail A

NOTE: NEW SOLDIER COURSE BRICK VENEER AND ANGLES MUST BE REPLACED IN 4 FOOT SECTIONS. WORK MAY BE SIMULTANEOUSLY PERFORMED IN A SKIP PATTERN OF ALTERNATING 4 FEET SEQUENCES; DO NOT DEMOLISH ADJOINING SEQUENCE UNTIL NEW MORTAR IS CURED. CONTRACTOR IS TO ENSURE ADEQUATE SHORING IS IN PLACE TO PREVENT THE TRANSFER OF ADDITIONAL LOAD INTO THE EXISTING BRICK TIES.
