Consent Agenda Item (Action Item): Consider/Approve the construction documents and authorize the request to advertise for bids for the conversion of the baseball and softball infields to synthetic turf and the correction of ongoing drainage issues at Floyd Central High School, pending KDE approval.

Applicable State Law or Regulation: General Powers and Duties of the Board / Capital Construction Process, 702 KAR 4:160.

Fiscal/Budgetary Impact: This project will be funded through the FSPK bond sale.

History/Background: The baseball and softball facilities at Floyd Central High School serve student-athletes from three feeder elementary/middle schools, as well as Floyd Central High School. Since the construction of the Floyd Central athletic complex, the fields have experienced significant wear due to heavy usage and weather-related conditions, resulting in the loss of valuable practice and game time.

The proposed project will enhance both the baseball and softball programs throughout the attendance area by improving field durability, correcting persistent drainage issues, and reducing maintenance requirements, increasing field availability, and, most importantly, promoting student-athlete safety.

Ongoing drainage issues have resulted in frequent game cancellations due to standing water and unstable field conditions. Additionally, ground settling has created potential safety hazards for student-athletes and has limited the overall functionality of the facilities.

Project History:

- January 28, 2026: Approved the BG-1 for the Floyd Central High School and Betsy Layne High School Athletic Turf Projects.
- June 22, 2026: Approved the revised BG-1.

Recommended Action: Approve the construction documents and authorize the request to advertise for bids for the project, pending KDE approval.

Contact Person: Kevin O'Quinn, Director of Facilities

Director

Superintendent

SITE STORM DRAINAGE NOTES

1. **THEORY** The authors have been able to find no published work on the use of the *in vitro* test system described in this paper. However, the authors have been able to find a number of papers on the use of the *in vivo* test system. The authors have found that the *in vivo* test system is used to study the effects of various factors on the growth of bacteria in the gut. The authors have found that the *in vivo* test system is used to study the effects of various factors on the growth of bacteria in the gut. The authors have found that the *in vivo* test system is used to study the effects of various factors on the growth of bacteria in the gut.
